

The AI-Native Film Studio

Where Finite Resources Meet Infinite Worlds.

WHO WE ARE

01 The new Hollywood Standard

Utopai Studios is a tech hub for video storytelling, building a state-of-the-art cinematic video generation model and agentic workflow to support narrative creation across formats, audiences, and platforms. We bridge the gap between traditional cinematic storytelling and cutting-edge generative technology and have a joint venture, **Utopai East**, a TV and film studio that is centered on building the next generation of internationally scalable intellectual property.

OUR MISSION

We give creators the power to tell epic stories as they were meant to be told.

Founded by AI industry veterans Cecilia Shen (CEO) and Jie Yang (CTO), Utopai Studios brings together leaders from top technology and film companies, including Google, Meta, Amazon, Adobe, and Princeton.

WHAT WE DO

02 Our work

CORTÉS

Co-produced with Ex Machina Studios, Cortés is set in 1519 and follows Hernán Cortés as he defies impossible odds to conquer a nation. Long considered unfilmable due to its immense scope, production demands, and cost, Cortés will be released as a two-part film event, with each installment running approximately 100 minutes.

PROJECT "SPACE"

Described as Top Gun meets War of the Worlds, it is the first large-scale narrative film and series projects, currently in production, to integrate AI technology directly into professional, audience-facing storytelling workflows.

[Learn more](#)

UTOPAI EAST

Our dedicated division focused on bringing world-class Korean and Japanese IP to global audiences through advanced AI localization and production.

THE DIRECTOR'S TOOLKIT

03 Coveted features

We've built the model and workflow you've always dreamed of, but could only piece together manually. Here's where we stand out:

Creative Sovereignty

MULTI SHOT-LEVEL CONTROL

Translates directly into cinematic output. Manage the composition, camera positioning, and staging.

INTELLIGENT POST-PRODUCTION

Use our integrated AI Copilot for granular, smart editing at both the frame and video level, allowing for surgical refinements without restarting from scratch.

Narrative-Aware Consistency

AGENTIC STORY-TO-MOVIE PIPELINE

Move beyond single-prompt fragments. Our system understands narrative intent, maintaining consistent character identities, costumes, and world-building across shots, scenes, and entire episodes.

PROPRIETARY CHARACTER LOCKING

Eliminate "character drift" with dedicated technology that ensures character consistency.

Production-Grade Infrastructure

BROADCAST-READY FIDELITY

We deliver industry-leading cinematic motion and visual aesthetics. These aren't just prototypes; they are production-ready assets for final delivery.

Built for Collaborative Teams

SHARED ENVIRONMENTS

Directors, concept artists, and editors can share workflows and scenes in real-time.

SEAMLESS HANDOFFS

Eliminate the "scattered clip" chaos. By sharing the same web environment, teams ensure the final edit aligns perfectly with the initial previs.

OPPORTUNITIES

04 Work with us

"We are looking for the next generation of storytellers who view AI as a brush, not a replacement."

CREATIVE PROSPECTS

We are actively seeking directors, concept artists, and showrunners to pilot new projects within our proprietary ecosystem.

JOINT VENTURES

We partner with existing IP holders to revitalize "unfilmable" or budget-prohibitive scripts using our cost-effective, high-scale pipeline.
